# 1 System Overview

## 1.1 Description

A Purchasing System is a system used by numerous organizations to aid their businesses management in terms of their inventory. This system manages the entire acquisition process from purchase requisition to invoice and acts as a key component of effective inventory management. Whenever an organization lacks certain items due to an increase in organizational size, replacement of defective items or relocation, organizations or companies make use of this system to purchase the desired items which are available from several vendors so that they can continue their operation. The process of purchasing items via the purchase system can be complex. It starts with requisition of requested items, request for quotation, record quotation, issue purchase order, record delivery order and lastly recording the invoice. At the end of the process, the requested items will be finally delivered to such organization for usage with information of each process are available for viewing of its status and descriptions of which processes are each attached to.

The Purchasing System used in this maintenance assignment is a web-based application that utilized Django libraries with the use of Microsoft Visual Studio 2017 Professional and Python as its language. Django is an open-source web framework, designed specifically for Python language, to simplify the creation of database-driven websites.

## 1.2 Actors

There are mainly three actors that used the purchasing system, including a manager, finance executive, and system administrator. The following table (Table 1.2) shows the expected level of knowledge for each actor.

Actor	Description	Required Knowledge
Manager	An individual who uses the purchase system to issue purchase requisition.	Basic knowledge of creating and viewing purchase requisition.
Finance Executive	An individual who uses the purchase system to issue the purchase price of the items.	Basic knowledge of other activities, including the request for quotation, record quotation, issue purchase order, record delivery order, and record invoice.
System Administrator	A developer who performs maintenance on the purchase system.	Basic knowledge of system maintenance skills, including managing the user accounts, requisitions, quotations, purchase orders, delivery orders, and invoices.

Table 1.2: Actors of Purchasing System

## 1.3 Assumptions and Dependencies

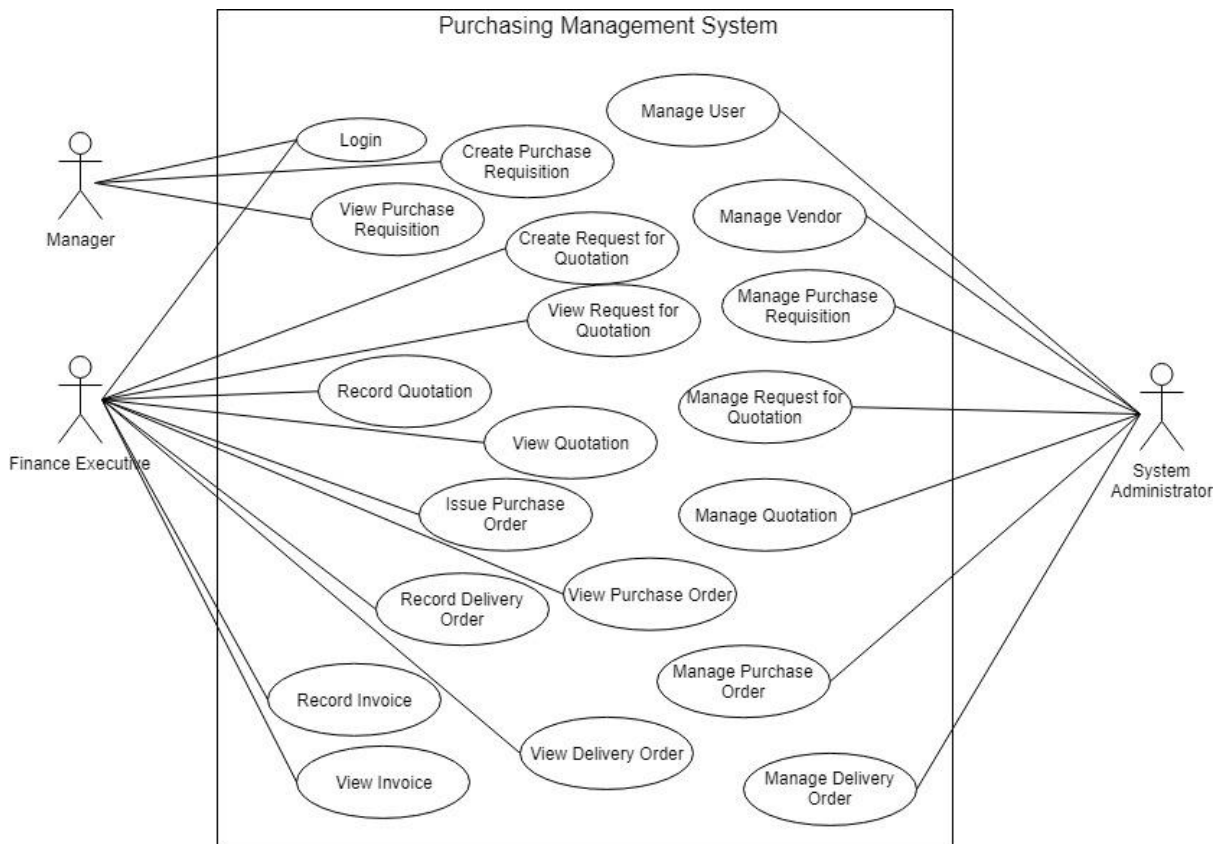

The assumptions and dependencies of the purchase system are as follows: -

### 1.3.1 Related Software and Hardware

There are no hardware requirements that will be used to setup the purchase system. Purchase system is a web portal that can run on any personal computer via a web browser. It is required to have an internet connection to run the system. The system requires support of following software tools:

- Microsoft Visual Studio 2017 Professional to use for manipulating the python code
- Web Browser to test the result of web framework

## 1.4 Use Case Diagram

**Figure 1.4: Purchasing Management System Use Case Diagram**

Figure 1.4.1 above showed the Use Case Diagram for the Purchasing System. This diagram consists of three actors which are the Manager, Finance Executor and the System Administrator. Each of the

actors have the specific features that will be accessible through the system. The Manager will be able to access the Login, Create Purchase Requisition and View Purchase Requisition features for the Purchasing System. Login is required for the manager enters into the system, and then the Manager will be able to Create a Purchase Requisition. After the manager confirm the purchase requisition, the manager will have the option to view the purchase requisition to have a summary page on the previous submission.

Another actor from the use case diagram is the Finance Executive, he/she will have to access the login page first, then the finance executive would create request for quotation. After filling the form, the finance manager would confirm and prompt to use the view request for quotation. After filling the quotation, the finance manager will prompt to record quotation and confirms all the details. After confirming, the finance manager will be able to view the recorded quotation. The recorded quotation will allow the finance manager to issue a purchase order in the system and view it. Next, a record delivery form will be issued and reviewed for further reference. Finally, a record invoice will be created as the last step in the management system to be used as a billing towards the company.

The final actor which is the system administrator. It acts the system administrator would manage the user, vendor, purchase requisition, request for quotation, quotation, purchase order, and the delivery order.

Actors	Modules
Manager	<ul style="list-style-type: none"> <li>• Login</li> <li>• View Purchase Requisition</li> <li>• Create Purchase Requisition</li> </ul>
Finance Executive	<ul style="list-style-type: none"> <li>• Login</li> <li>• Create Request for Quotation</li> <li>• View Request for Quotation</li> <li>• Record Quotation</li> <li>• View Quotation</li> <li>• Issue Purchase Order</li> <li>• View Purchase Order</li> <li>• Record Delivery Order</li> <li>• View Delivery Order</li> <li>• Record Invoice</li> <li>• View Invoice</li> </ul>
System Administrator	Editing the database <ul style="list-style-type: none"> <li>• Manage User</li> <li>• Manage Vendor</li> <li>• Manage Purchase Requisition</li> <li>• Manage Request for Quotation</li> <li>• Manage Quotation</li> <li>• Manage Purchase Order</li> <li>• Manage Delivery Order</li> </ul>

**Table 1.4: Modules accessible by each Actor**

## 2 Data Design

### 2.1 Data Dictionary

Table Name	Attribute Name	Data Type	Field Length	Primary Key (PK) & Foreign Key (FK)	FK Reference table	Description
APP (Item)	Item id	Varchar	5	PK		Indicate a unique id for a particular item.
	Item Name	Varchar	Unlimited			Indicate name of item.
	Item Description	Varchar	Unlimited			Indicate the characteristic of item.
APP(Person)	User Id	Varchar	Unlimited			Indicate a unique id for login the purchase system.
	Person Id	Varchar	4	PK		Indicate a unique id for an individual.
	Person Name	Varchar	Unlimited			Indicate name of individual
	Person Address	Varchar	Unlimited			Indicate the address and name of place that stayed
	Person Phone Number	Varchar	Unlimited			Indicate the contact number
	Person Role	Varchar	Unlimited			Indicate the role of an individual in the organization

APP(Vendor)	Vendor Id	Varchar	5	PK		Indicate a unique id for vendor.
	Vendor Name	Varchar	Unlimited			Indicate name of vendor
	Vendor Phone Number	Varchar	Unlimited			Indicate the contact number of vendors
	Vendor Address	Varchar	Unlimited			Indicate the address and name of place that stayed
	Vendor Email	Varchar	Unlimited			Indicate the email address of vendor
Delivery (Delivery Order Items)	Delivery Order Id	Varchar	10	PK		Indicate a unique id for delivery order.
	Item Id	Varchar	5	FK	Item	Indicate a unique id for item.
	Quantity	Integer				Indicate the number of deliveries made.
	Unit Price	Integer				Indicate the price per unit item
	Total Price	Integer				Indicate the total price of item.
	Ref Id	Varchar	Unlimited			Indicate the reference id for delivery order.
Delivery (Delivery Order)	Delivery Order Id	Varchar	10	PK		Indicate a unique id for delivery order.
	Shopping Instructions	Varchar	Unlimited			Indicate the information for shipping details.
	Time Created	TimeStamp	Timestamp			Indicate the time and date to deliver.
	Description	Varchar	Unlimited			Indicate additional remark of the delivery.
	Total Price	Integer				Indicate the total price of delivery order.
	Person id	Varchar	4	FK	Person	Indicate a unique id for individual.

	Vendor id	Varchar	5	FK	Vendor	Indicate a unique id for vendor.
	Purchase Order id	Varchar	7	FK	Purchase Order	Indicate a unique id for purchase order.
Invoice (Invoice Item)	Invoice Id	Varchar	10	PK		Indicate a unique id for invoice
	Item Id	Varchar	5	FK	Item	Indicate a unique id for item
	Quantity	Integer				Indicate the number of items
	Unit Price	Integer				Indicate the price of one item
	Total Price	Integer				Indicate the total price
	Ref Id	Varchar	Unlimited			Indicate a unique id for reference.
Invoice (Invoices)	Invoice Id	Varchar	10	PK		Indicate a unique id for invoice
	Time Created	TimeStamp				Indicate the date and time for invoice to be made.
	Description	Varchar	Unlimited			Indicate the information of invoice
	Total Price	Integer				Indicate the total price of invoice
	Invoice Status	Varchar	Unlimited			Indicate the status of invoice
	Purchase Order Id	Varchar	7	FK	Purchase Order	Indicate a unique id for purchase order.
	Person Id	Varchar	4	FK	Person	Indicate a unique id for individual.
	Vendor Id	Varchar	5	FK	Vendor	Indicate a unique id for vendor.

Purchase Order (Purchase Order Item)	Purchase Order Id	Varchar	7	PK		Indicate a unique id for purchase order.
	Item Id	Varchar	5	FK	Item	Indicate a unique id for item
	Quantity	Integer				Indicate the number of items purchased.
	Unit Price	Integer				Indicate the price of one item.
	Total Price	Integer				Indicate the total price of purchase order
	Ref Id	Varchar	Unlimited			Indicate a unique id for purchase order.
Purchase (Purchase Order)	Purchase Order Id	Varchar	7	PK		Indicate a unique id for purchase order
	Shipping Instructions	Varchar	Unlimited			Indicate the information for deliver the order
	Time Created	TimeStamp				Indicate the time and date to made purchase order.
	Description	Varchar	Unlimited			Indicate the additional information to made purchase order.
	Total Price	Integer				Indicate the total price of purchase order.
	Person Id	Varchar	4			Indicate a unique id for individual.
	Quotation Id	Varchar	10	FK	Quotation	Indicate a unique id for quotation.
	Vendor Id	Varchar	5	FK	Vendor	Indicate a unique id for vendor.
Purchase Requisition (Purchase	PR id	Varchar	10	PK		Indicate a unique id for purchase requisition
	Item id	Varchar	5	FK	Item	Indicate a unique id for item.

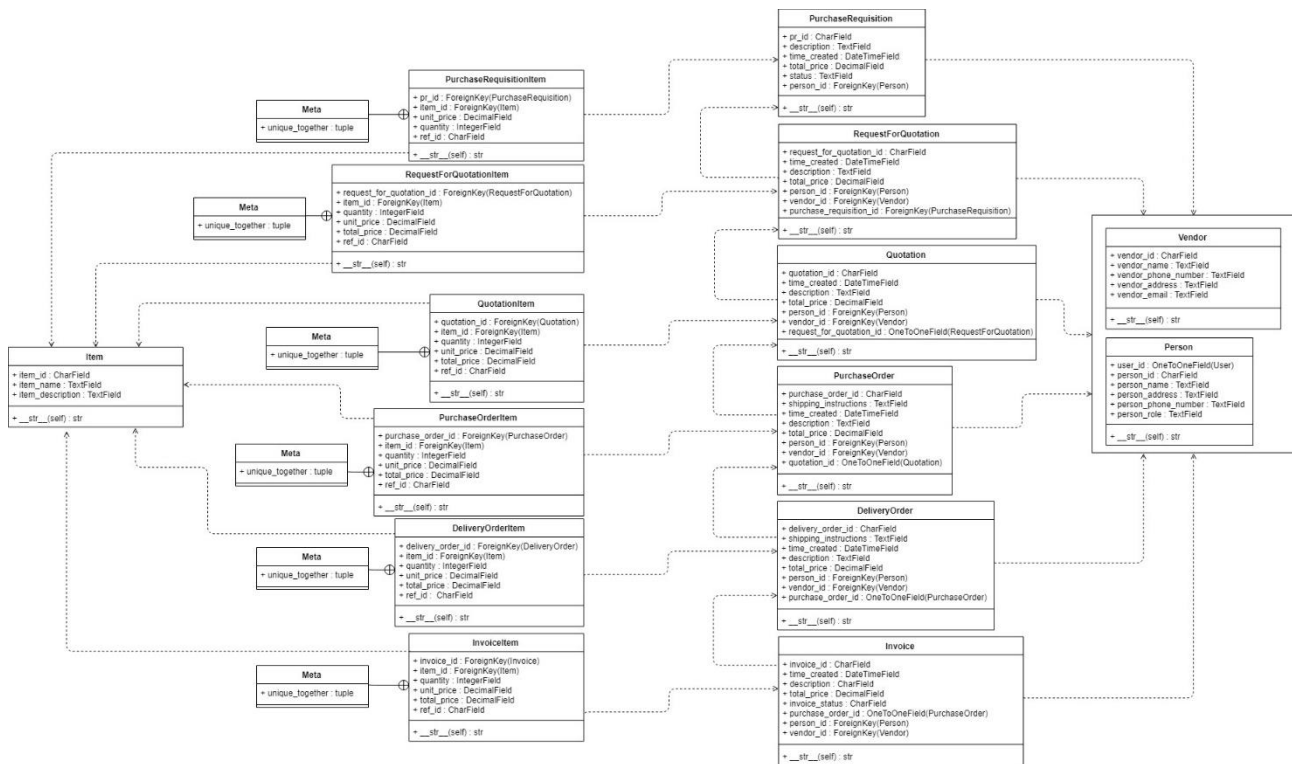

Requisition items)	Unit Price	Integer				Indicate price of one item.
	Quantity	Integer				Indicate the number of items made
	Ref Id	Varchar				Indicate a unique id for reference.
Purchase Requisition	PR Id	Varchar	10	PK		Indicate a unique id for purchase requisition.
	Description	Varchar				Indicate the additional information for purchase requisition.
	Time Created	TimeStamp				Indicate the time and date of purchase requisition made.
	Total Price	Integer				Indicate the price of purchase requisition.
	Status	Varchar				Indicate the status of purchase requisition.
	Person id	Varchar	4	FK	Person	Indicate a unique id for individual.
Quotation (Quotation Items)	Quotation id	Varchar	10	PK		Indicate a unique id for quotation
	Item id	Varchar	5	FK	Item	Indicate a unique id for item
	Quantity	Integer				Indicate the number of items in the quotation
	Unit Price	Integer				Indicate the price of item per unit
	Total Price	Integer				Indicate the total price
	Ref Id	Varchar				Indicate a unique id for reference.
Quotation (Quotations)	Quotation Id	Varchar	10	PK		Indicate a unique id for quotation
	Time Created	Timestamp				Timestamp

	Description	Varchar				Indicate additional information for quotation made.
	Total Price	Integer				Indicate total price of quotation
	Person Id	Varchar	4	FK	Person	Indicate a unique id for individual
	Vendor Id	Varchar	5	FK	Vendor	Indicate a unique id for vendor
	Request for Quotation Id	Varchar	10	FK	Request for Quotation	Indicate a unique id for request for quotation.
Request for Quotation (Request for Quotation item)	Request for quotation Id	Varchar	10	PK		Indicate a unique id for request for quotation.
	Item Id	Varchar	5	FK	Item	Indicate a unique id for item.
	Quantity	Integer				Indicate the number of items
	Unit Price	Integer				Indicate the price of one item.
	Total Price	Integer				Indicate the total price
	Ref Id	Varchar				Indicate a unique id for reference
Request for Quotation	Request for quotation id	Varchar	10	PK		Indicate a unique id for request for quotation.
	Time Created	Timestamp				Indicate the time and date for request for quotation made.
	Description	Varchar				Indicate additional information for request for quotation.
	Total Price	Integer				Indicate the total price
	Purchase Requisition Id	Varchar	10	FK	Purchase Requisition	Indicate a unique id for purchase of requisition.
	Person Id	Varchar	4	FK	Person	Indicate a unique id for individual

	Vendor Id	Varchar	5	FK	Vendor	Indicate a unique id for vendor.
--	-----------	---------	---	----	--------	----------------------------------

**Table 2.1 Data Dictionary for the Purchasing Management System**

## 2.2 Class Diagram

**Figure 2.2: Purchasing Management System Class Diagram**

Figure 2.2 above shows the overall class diagram of Purchase Management System. The classes representing the modules of the system, from Purchase Requisition module to Invoice module, must be dependent of each other in order to implement the system as a whole via foreign keys. RequestForQuotation class depends on attributes of PurchaseRequisition class, Quotation class depends on attributes of RequestForQuotation class, PurchaseOrder class depends on attributes of Quotation class, as well as DeliveryOrder class and Invoice class depends on attributes of PurchaseOrder class. These classes also depend on attributes of both Person and Vendor classes. PurchaseRequisitionItem, RequestForQuotationItem, QuotationItem, PurchaseOrderItem, DeliveryOrderItem, and InvoiceItem classes depend on attributes of Item class.

## 2.3 Sample Data

Table 2.3 below shows the sample data that are used to implement the Purchasing Management System.

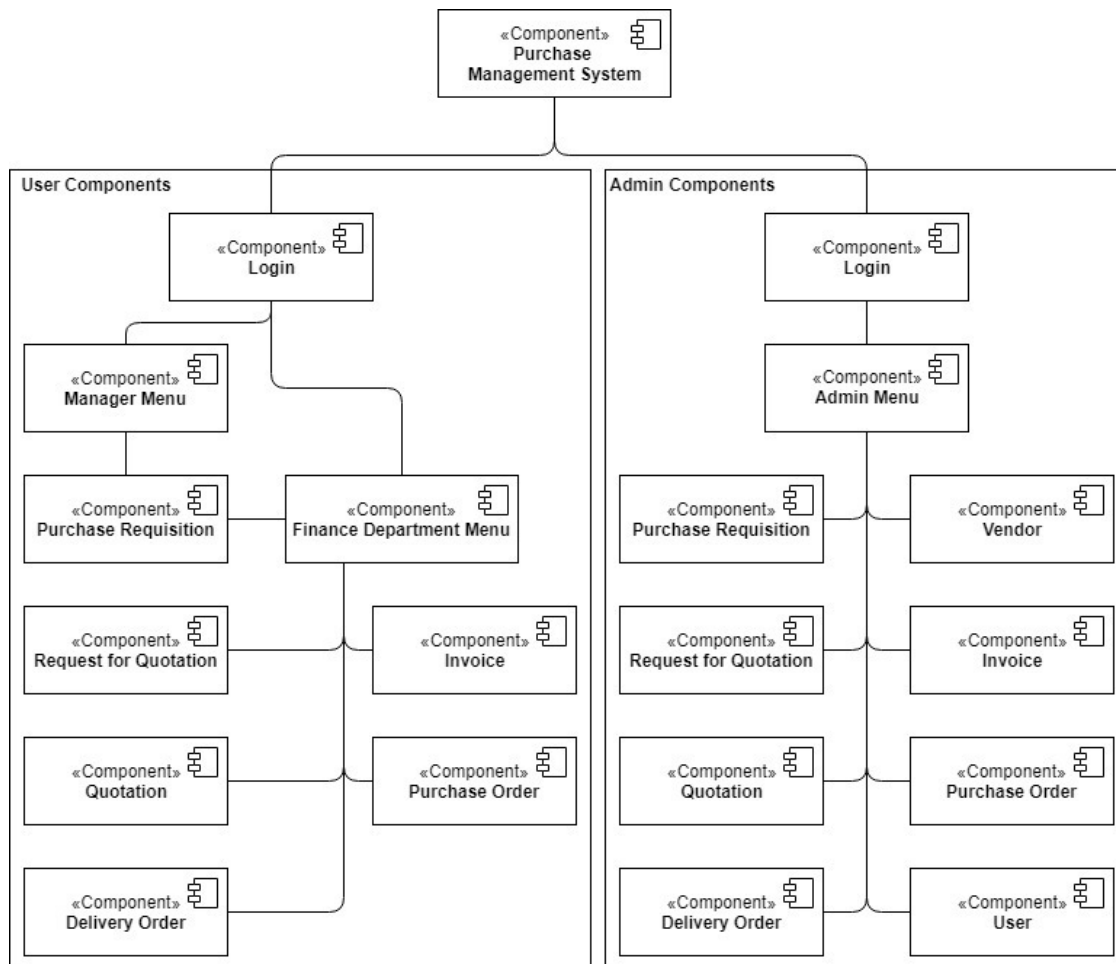

Person ID	4075
Vendor ID	V0001
Purchase Requisition ID	PR46991772
Item ID	L0002
Item Name	Lenovo IdeaPad Desktop
Description	I7,16GB Ram

Quantity	100
Price Per Unit	4000
Request For Quotation ID	RFQ2389233
Record Quotation ID	QUO5381995
Issue Purchase Order ID	PO1002
Delivery Order ID	PO71631363
Invoice ID	INV2654874
Purchase Order ID	2654874

**Table 2.3: Sample Data of Purchasing Management System**

### 3 Software Architecture

#### 3.1 Software Architecture Diagram

**Figure 3.1 Purchase Management System Software Architecture Diagram**

The architecture diagram of purchasing system is dividing into two part which are user and admin component. In the user components, there are seven components to be handle which are login, purchase requisition, request for quotation, quotation, delivery order, invoice and purchase order.

Meanwhile for admin component, there are nine components to be involved which are login, purchase requisition, request for quotation, quotation, delivery order, vendor, invoice, purchase order and also user detail. Therefore, admin component has provided user the authorization to edit the data that stored in the system compare to user component. Admin Component can be function as database for purchasing system.

### 3.2 Software Modules

The following table (Table 3.2) contains the list of modules of the purchase system, separated by its maintenance personnel responsible.

Module	Description	Assigned To
Login	To allow user to log in with his/her existing account.	Luqman Saidi
Create Purchase Requisition	To allow user to create purchase requisition to list out items for purchases.	Hamidi
View Purchase Requisition	To allow user to view a list of purchase requisition.	Hamidi
Create Request for Quotation	To allow user to create request for quotation to be sent to vendors.	Chin Wei
View Request for Quotation	To allow user to view list of requests of quotation and detailed information of a selected request of quotation.	Chin Wei
Record Quotation	To allow user to record quotation given by vendors	Chin Wei
View Quotation	To allow user to view list of quotations and detailed information of a selected quotation.	Chin Wei
Issue Purchase Order	To allow user to issue purchase order for items to be sent to vendors.	Hamidi
View Purchase Order	To allow user to view list of purchase order and detailed information of a selected purchase order.	Hamidi
Record Delivery Order	To allow user to record delivery order for items to be delivered towards vendors	Luqman Saidi
View Delivery Order	To allow user to view list of delivery order and detailed information of a selected delivery order	Luqman Saidi
Record Invoice	To allow user to record invoice for as a reference and a billing to the purchaser	Luqman C.A
View Invoice	To allow user to view Invoice and detailed information of a selected delivery order.	Luqman C.A

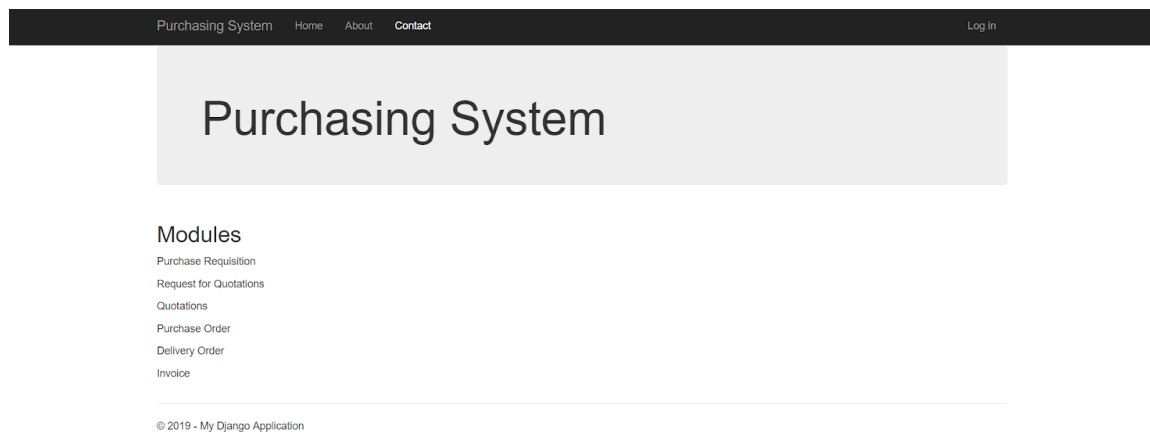

**Table 3.2: Software Modules and Their Respective Maintenance Personnel Responsible**

## 4 Software Modules

### 4.1 Module 1: Log in

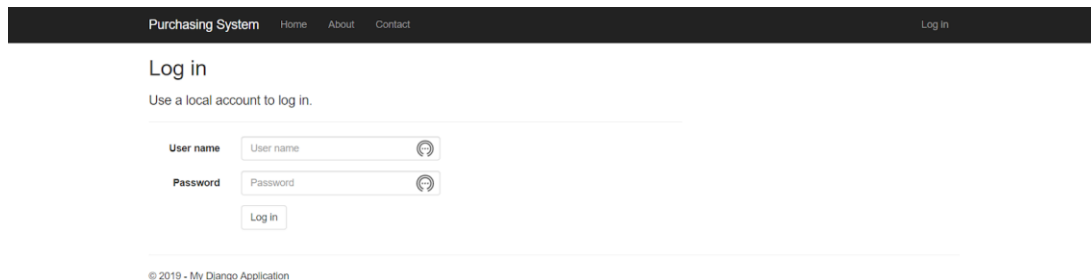

#### 4.1.1 Module 1 Screens

The following figures shows the sequence of screen login module. It starts off with user being directed towards the Homepage once accessing the system. The Log In tab will be available to be clicked upon on the top right corner.

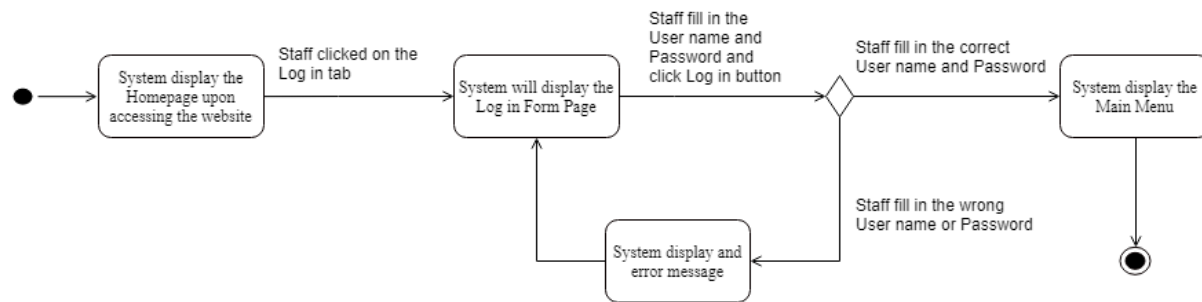

**Figure 4.1.1a: Homepage**

This figure shows the Log in form page where the users are required to fill the necessary information which is a correct User name and Password to be able to access the features in the system.

**Figure 4.1.1b: Login form page**

### 4.1.2 Module 1 Diagrams

**Figure 4.1.2: Login Module Activity Diagram**

Figure 4.1.2 above shows the activity diagram for Login module. The activity starts with the system displaying the homepage upon accessing the website. After the user click on the Login tab, they will be directed to a login form page where they are required to fill the necessary information which is username and password to gain access into the system. If the user entered a wrong input, the system will display an error message, “Please enter a correct user name and password”, which then they are required to input the information again. If the user entered the correct username and password, the system will display the Main menu of the Purchasing System.

### 4.1.3 Module 1 Files

The following table (Table 4.2.3) contains the list of main files of the module.

File Name	Extensions
admin	.py
models	.py
tests	.py
views	.py

**Table 4.2.3: Main Files of Login Module**

### 4.1.4 Module 1 Report

There are no error or issue found in this module.

## 4.2 Module 2: Create Purchase Requisition Module

### 4.2.1 Module 2 Screens

The following images below are sequence of screens where Create Purchase Requisition is implemented.

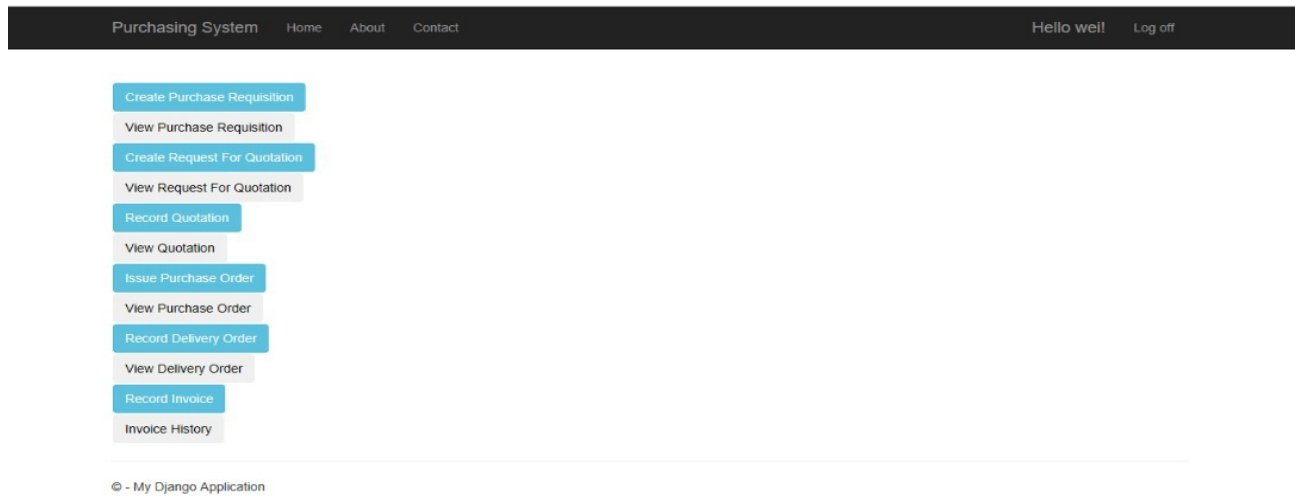

Figure 4.2.1a: Main Menu Page

#	Item ID	Item Name	Description	Quantity	Price Per Unit
1	<input type="text" value="Item id"/>	<input type="text" value="Item name"/>	<input type="text" value="Description"/>	<input type="text" value="Quantity"/>	<input type="text" value="Price Per Unit"/>

Figure 4.2.1d: Purchase Requisition Summary Page

## 4.2.2 Module 2 Activity Diagrams

**Figure 4.2.2: Create Purchase Requisition Activity Diagram**

Figure 4.2.2 above showed the activity diagram for Create Purchase Activity module. The activity starts with the Main Menu page where the system will display 'Create Purchase Requisition' button. After the user clicked the button, the user will be navigated to the Purchase Requisition Form page, where the user is required to fill in the relevant information. After the system has received the inputs by the user, the user will be directed to the Confirmation page, where the user will have a choice between to confirm the submission or cancel it. If the user chooses to cancel, the user will be redirected back to the Purchase Requisition Form page for any correction or modification. If the user chooses to submit, the user will be navigated to the Purchase Requisition Summary page for references before returning to the Main Menu page.

## 4.2.3 Module 2 Files

The following table (Table 4.2.3) contains the list of main files of the module.

File Name	Extensions
admin	.py
models	.py
tests	.py
views	.py

No	Errors/ Enhancements/Adaptation	Action Taken
1	No error detected	

**Table 4.6.4: Errors/Enhancements/Adaptation within Record for Quotation Module**

## 4.7 Module 7: View Quotation

### 4.7.1 Module 7 Screen

The following images below are sequence of screens where View Quotation is implemented.

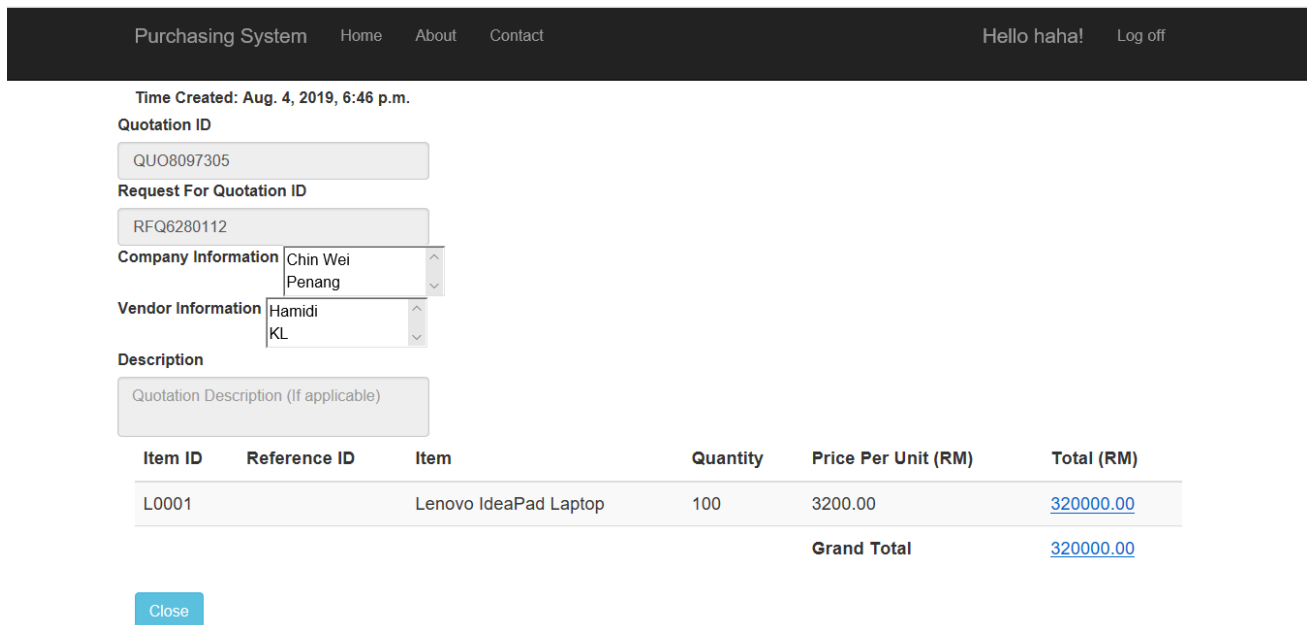

The screenshot shows a web application interface for viewing a quotation. At the top is a dark navigation bar with links for 'Purchasing System', 'Home', 'About', and 'Contact' on the left, and 'Hello haha!' and 'Log off' on the right. Below the navigation bar is a table with the following data:

Quotation ID	Staff ID	Vendor ID	Time	Status
QUO8097305	4076	V0001	Aug. 4, 2019, 6:46 p.m.	Issue Purchase Order

Below the table is a 'Back' button. At the bottom of the page, there is a copyright notice: '© - My Django Application'.

Figure 4.7.1a: View Quotation Page

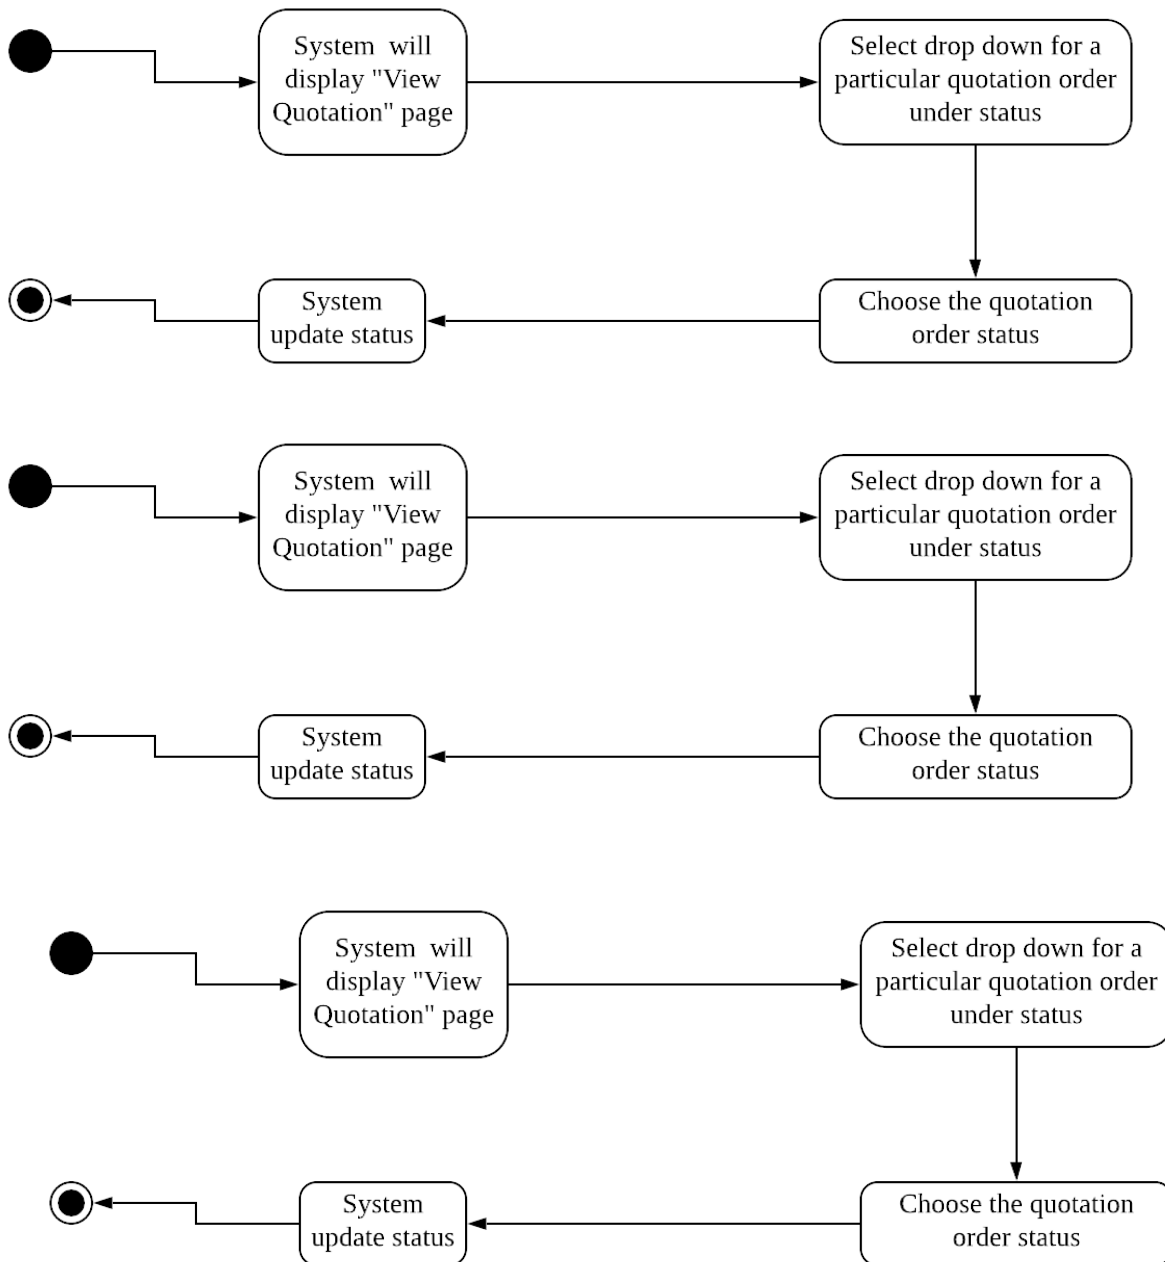

The screenshot shows a detailed view of a quotation. At the top is a dark navigation bar with links for 'Purchasing System', 'Home', 'About', and 'Contact' on the left, and 'Hello haha!' and 'Log off' on the right. Below the navigation bar, the 'Time Created' is displayed as 'Aug. 4, 2019, 6:46 p.m.'. The 'Quotation ID' is 'QUO8097305'. The 'Request For Quotation ID' is 'RFQ6280112'. The 'Company Information' is 'Chin Wei Penang'. The 'Vendor Information' is 'Hamidi KL'. The 'Description' is 'Quotation Description (If applicable)'. Below this information is a table with the following data:

Item ID	Reference ID	Item	Quantity	Price Per Unit (RM)	Total (RM)
L0001		Lenovo IdeaPad Laptop	100	3200.00	<a href="#">320000.00</a>
Grand Total					<a href="#">320000.00</a>

At the bottom of the page is a 'Close' button.

Figure 4.7.1b: View Quotation Detail Page

#### 4.7.2 Module 7 Activity Diagram

**Figure 4.7.2: View Quotation Page Activity Diagram**

In the figure 4.7.2, the user will be entered into view quotation page and then asked to select the drop down for a particular quotation order under status. After the selection is made, the system will update and display the quotation detail for user.

### 4.7.3 Module 7 Files

The following table (Table 4.7.3) contains the list of main files of the module.

**Folder: Quotation**

File Name	Extensions
__init__	.py
admin	.py
apps	.py
models	.py
tests	.py
view	.py

**Table 4.7.3: Main Files of View Quotation**

### 4.7.4 Module 7 Report

The following table (Table 4.7.4) contains the list of errors/enhancements/adaptations found alongside with actions that will be taken.

**Table 4.7.4: Errors/Enhancements/Adaptation within View Quotation Module**

No	Errors/ Enhancements/Adaptation	Action Taken
1	Error is detected when issue purchase order button is pressed. The error known as MultiValueDictKeyError where it is caused via the system failed to access to 'quo_id' key in the dictionary. (Figure 4.7.4a)	Try and except the error in the method named <i>quotationhistorydetails</i> in view.py under Quotation folder. (Figure 4.7.4b) The solution is intended to direct user into issue purchase order when the button is pressed in view quotation page.

## 4.11 Module 11: View Delivery Order

### 4.11.1 Module 11 Screens

The following screen display the Main Menu of the Purchasing Management System. The View Delivery Order will be available to be clicked upon.

**Figure 4.11.1a: Main Menu Page**

The following screen displays the list of delivery order with information of Delivery Order ID, Staff ID, Vendor ID and Time.

The screenshot shows the 'View Delivery Order' page. It features a dark navigation bar at the top with links for 'Purchasing System', 'Home', 'About', and 'Contact' on the left, and 'Hello well' and 'Log off' on the right. Below the navigation bar, there is a table with four columns: 'Delivery Order ID', 'Staff ID', 'Vendor ID', and 'Time'. The table contains two rows of data. Below the table, there is a 'Back' button. At the bottom, there is a copyright notice: '© - My Django Application'.

Delivery Order ID	Staff ID	Vendor ID	Time
PO23952689	4075	V0001	July 28, 2019, 4:57 p.m.
PO71631363	4075	V0001	July 28, 2019, 5:16 p.m.

**Figure 4.11.1b: View Delivery Order Page**

The following figure shows a summary page once an item of the view delivery order is being selected.

Item ID	Item	Quantity	Price Per Unit (RM)	Total (RM)
L0002		100	4000.00	400000.00
Grand Total				400000.00

**Figure 4.11.1c: View Delivery Order Summary Page**

#### 4.11.2 Module 11 Diagrams

**Figure 4.11.2: View Delivery Order Activity Diagram**

Figure 4.11.2 above shows the activity diagram for View Delivery Order module. This activity starts with the Main Menu page where the system will display 'View Delivery Order' button. After the user clicked on the button, the user will be directed to the View Delivery Order page, where the users will be prompted through a list of several Delivery Order ID that have been submitted. The user can click on any Delivery Order listed, or the user has the option to click the 'Back' button to navigate back to the Main Menu page. If the user chooses one of the Delivery Order ID, the user will be navigated to the Delivery Order Summary page for any information viewing.

#### 4.11.3 Module 11 Files

The following table (Table 4.11.3) contains the list of main files of the module.

File Name	Extensions

**Table 4.11.3: Main Files of Record Delivery Order Module**

#### 4.11.4 Module 11 Report

The following table (Table 4.11.4) contains the list of errors/enhancements/adaptations found alongside with actions that will be taken.

No	Errors/ Enhancements/Adaptation	Action Taken
1.	Delivery Order ID might be misinterpreted as Purchase Order as it starts with PO	The system is fixed to display the correct and easier view for Delivery Order ID which is DO instead of PO

**Table 4.11.4: Errors/Enhancements/Adaptation within View Delivery Order Module**

Delivery Order ID	Staff ID	Vendor ID	Time
PO23952689	4075	V0001	July 28, 2019, 4:57 p.m.
PO71631363	4075	V0001	July 28, 2019, 5:16 p.m.

### 4.12.2 Module 12 Diagrams

**Figure 4.12.2: Record Delivery Order Activity Diagram**

Figure 4.12.2 above showed the activity diagram for the Record invoice module. The activity begins on the Main menu after the user has recorded delivery order and view the recorded order where there is a button 'Record Invoice'. After the user clicked the button, the user will be redirected to the Record Invoice Form where the user is required to search the Purchase Order ID and The Invoice ID, Purchase Order ID, Staff ID, Vendor ID are shown based on the existing information from the Purchase Order ID. The user can fill in the Invoice Description if there is additional information for future reference. After the system has received the inputs by the user, the user will then be redirected to the confirmation page, where the user will finalize and choose either to proceed by pressing the 'confirm' button or to redo the form by pressing the 'cancel' button. Once user chooses to submit, the user will be navigated to the Record Invoice Summary page for references before returning to the Main Menu page.

### 4.12.3 Module 12 Files

File Name	Extensions
admin	.py
models	.py
tests	.py
views	.py

**Table 4.13.3: Main Files of Invoice History Module**

### 4.12.4 Module 12 Report

The following table (Table 4.12.4) contains the list of errors/enhancements/adaptations found alongside with actions that will be taken.

No	Errors/ Enhancements/Adaptation	Action Taken
1	Key in the wrong input will direct the user to an error page.	Rather than navigating the user towards the error page, the user should be informed of the mistakes they need
2	The user is navigated to an error page after he/she confirms the submission of the Record Invoice. Therefore second invoice never confirmed.	Correction will be done within the code itself.

**Table 4.12.4: Errors/Enhancements/Adaptation Record Invoice within Module**

## DoesNotExist at /fillinginvoice

PurchaseOrder matching query does not exist.

```
